Reproduction — ACSIncome (DI) (T=50000, B=100, reps=150)
(a) convergence to asymptotic law
$W_2(\hat{P}_k,\ \mathcal{N}(\phi^*, \sigma^2/k))$
iterations k
(b) mean interval score
MIS (lower is better)
iterations k
(c) empirical coverage
coverage
held-out estimand $\hat{\phi}(\theta^*)$
population $\phi(\theta^*)$
nominal $1-\alpha$
iterations k
(d) interval width vs sampling spread
width
mean CI width
4 x sd of $\phi(\bar{\theta}_k)$
iterations k
